				<p>(built 1715) estate. Originally the northwest boundary coincided with the parish boundary but the latter was straightened and moved southeast mid-20th century. The parish boundary now bisects the site without reference to geography or habitat.</p> <p>The site is designated by Natural England under the European Habitats Directive as <i>Priority Habitat: Deciduous Woodland (England)</i>. It is additionally covered by a Forestry Commission England <i>Felling Licence Agreement</i>.</p> <p>The edges (first 150m from boundaries) are surviving old (but not 'ancient') woodland (presumably late 18th or early 19th century) with ash standards and hazel, spindle and dogwood understorey, and some horse chestnut. Ground cover includes extensive red campion and other woodland flowers. The middle (shown on the 1956 OS map as cleared) is currently (April 2015) a mature poplar plantation (the trees appear to be about 50 years old). The site is managed woodland, with clearings resulting from felling of standard ashes being especially good for wild flowers. There is a good range of breeding and wintering birds, including warblers, woodcock and several other BAP species.</p> <p>There has been informal use as unofficial 'open space' (paths, bike trails) but this has been discouraged by new (April 2015) fencing.</p> <p>Adjacent to PRoW (bridleway/byway) Z11.</p> <p>High local or District level historical and ecological significance.</p> <p>Potential for amenity designation and for further enhancement of its ecological importance and public access, e.g. by Woodland grant aid under NELMS from 2016.</p>	<p>& Wigston.</p> <p>It has some potential as an LGS associated with existing Oadby & Wigston BC housing (Woodland Grange/Gorse Lane) and potential HDC development NW of The Oaks Farm.</p>										
20	Glen Rise A6 roundabout (north and east)		LCC	<p>Roadside embankments, low fertility grassland on subsoil bank created with spare roadworks material, sown (2001) with, and now and managed for, local native wild flower species, including cowslips.</p> <p>Access via A6 road and integral footways.</p>											16

	of Oaks Road			<p>rushes etc.; a ?pre-Enclosure field boundary follows the small stream (now ditched) on the east boundary.</p> <p>Although ploughed in mid-20th century, ridge and furrow survives and low-intensity grassland management more recently has restored some of the ecological value. The fields, hedges and woodland edge together are habitat for several BAP species of birds.</p> <p>The southern portion, originally part of the water meadows and stream course of Burton Brook before its 19th and 20th century straightening, is now an area of wet meadow and marsh, with wetland plants including rushes, kingcups and lady's smock. This is one of the only two marshes in the parish.</p> <p>Access from PRoW (bridleway) C25.</p> <p>High local level historical and amenity significance. High local level ecological significance.</p>	<p>passes beneath the southern section of the site toward Glen sewage treatment works.</p> <p>Currently still grazed, with permitted development consent for fodder store.</p> <p>Marsh area was designated as District level SES in the VDS</p> <p>CANDIDATE LGS</p>										
34	Glen Sewage Treatment Works		STWA	<p>Buildings and plant, concrete surfaces, gravel and trees surrounding sewage filter beds etc.</p> <p>This is an important feeding and wintering site for birds, including swifts and hirundines (the dwindling village populations of these probably depend on this site for survival), finches, buntings and wagtails (all three UK species). Nine bird BAP species are regular.</p> <p>High District level significance for ecology.</p>		Yellow	Yellow	Green	Red	Red	Red	Yellow	Red	Green	14
35	Grazing field north and west of sewage works			<p>Well-preserved ridge and furrow fields showing two or three open field units with 's'-shaped ridges running down the slope toward the edge of a low terrace marking the limit of the Burton Brook floodplain. The old course of the brook (before straightening in connection with Glen Hall landscaping and later construction of the sewage works) can be seen as shallow, mostly dry meanders in the southeast part of the site.</p> <p>Access via PRoW (bridleway) C25.</p> <p>High local significance for history, landscape, ecology and amenity.</p>	CANDIDATE LGS	Green	Yellow	Green	Yellow	Yellow	Green	Green	Green	Green	30
36	Burton Brook: south bank			<p>Scrub, hedgerows, rough grassland and planted poplar</p>		Green	Yellow	Yellow	Yellow	Yellow	Green	Green	Green	Green	24
